# BIBLIOGRAPHY OF AGRICULTURE

Vol. 33

March 1969

No. 3

The Bibliography of Agriculture is an index to the literature of agriculture and the allied sciences received in the National Agricultural Library. Publications from any country are indexed, provided they are in one of the languages shown in CAPITALS at top of next column, or have summaries, abstracts, or translated titles in one of those languages.

Literature received more than one year after publication is generally not indexed. Exceptions are made for important scientific publications.

Indexing of articles on the processing of agricultural products is limited to those on primary processing.

Unsigned articles and those signed with pseudonyms or initials, editorials, letters to the editor, and columns appearing regularly, are omitted.

For more detailed coverage of the literature on pests and their control, please consult the *Pesticides Documentation Bulletin*, a biweekly publication of the National Agricultural Library.

## FORMAT

The Bibliography is a classified arrangement of references under the following subjects:

- USDA Publications
- State Agricultural Experiment Station Publications
- State Agricultural Extension Service Publications
- Agricultural Economics and Rural Sociology
- Agricultural Products
- Animal Industry
- Engineering
- Entomology
- Food and Human Nutrition
- Forestry
- Plant Science
- Soils and Fertilizers
- Miscellaneous

The classified section is followed by the listing of:

- New Periodicals and Serials
- Translations
- Food and Agriculture Organization of the United Nations (FAO) Publications

The last section of each monthly issue, except November, is the Author and Subject index for that issue.

For monographs the title is shown in the original language, followed by the English version. Titles of foreign language articles in serial publications are given in English only; the language of the text is shown in abbreviated form in parentheses at the end of the title. The following notations are used:

(Af)	Afrikaans	(Ic)	Icelandic
(Al)	Albanian	(In)	Indonesian
(Ara)	Arabic	(It)	ITALIAN
(Arm)	Armenian	(Ja)	JAPANESE
(Az)	Azerbaijani	(Ka)	Kazakh
(Be)	Belorussian	(Ko)	KOREAN
(Bu)	Bulgarian	(La)	Latvian
(Bur)	Burmese	(Li)	Lithuanian
(Ch)	CHINESE	(No)	NORWEGIAN
(Cz)	CZECH	(Pe)	Persian
(Da)	DANISH	(Pol)	POLISH
(Du)	DUTCH	(Por)	PORTUGUESE
(Es)	Estonian	(Rum)	Rumanian
(Fi)	Finnish	(Rus)	RUSSIAN
(Fl)	Flemish	(Se)	SERBO-CROATIAN
(Fr)	FRENCH	(Si)	Siamese
(Ge)	GERMAN	(Sl)	Slovenian
(Geo)	Georgian	(Sp)	SPANISH
(Gre)	GREEK	(Sw)	SWEDISH
(He)	Hebrew	(Ta)	Tadzhik
		(Tu)	TURKISH
(Hu)	HUNGARIAN	(Uk)	UKRAINIAN

Abbreviated names of the publications cited prior to July 1, 1964 are those from USDA Miscellaneous Publication 765—List of Serials Currently Received in the Library of the United States Department of Agriculture, July 1, 1957. Abbreviated names of all new periodical titles received after July 1, 1964, are taken from the American Standard for Periodical Title Abbreviations. As time allows, abbreviations set up for titles before that date will be converted to the new form.

The presence of the term "Ref." in the citation indicates that the article contains ten or more references to the literature.

Following each citation is the Library classification number which should be used when requesting loans or reproduction of articles.

## FREQUENCY OF PUBLICATION

The Bibliography is published monthly. The December issue is devoted wholly to a subject index and the cumulated Personal and Organizational index to the preceding eleven issues.

## AVAILABILITY OF REFERENCES CITED

### Loans

Most of the material in the National Agricultural Library collection may be borrowed by employees of the Department of Agriculture and by other libraries. In requesting loans, please include the library call number found at the end of the citation. Loan of periodicals is restricted to the Washington, D. C. area. Foreign statistical publications and rare books are loaned only by special arrangement.

### Free Distribution

U.S.D.A. publications. Domestic requests for publications of the United States Department of Agriculture will be filled free to libraries and other qualified agencies and organizations, as long as the supply lasts. (For ordering information, see Checklist of U.S.D.A. Publications in this issue.) Foreign institutions, organizations and agencies which issue publications may obtain U.S.D.A. publications in exchange by writing to the United States Department of Agriculture, National Agricultural Library, Exchange Unit, Washington, D. C., 20250.

State Agricultural Experiment Station and Extension Service publications. Publications issued by State Agricultural Experiment Stations and Extension Services are available except where noted, and as long as the supply lasts, from the issuing station or service. The National Agricultural Library does not distribute them; however, reproductions are available at regular Library rates.

### Technical Reports

Citations listed with the annotation "CFSTI" followed by price are also available for purchase from the Clearinghouse for Federal Scientific and Technical Information, U. S. Department of Commerce, Springfield, Virginia, 22151.

### Reproduction

All articles listed may be obtained in microfilm or photoprint form from the United States Department of Agriculture, National Agricultural Library, Photoduplication Section, Washington, D. C., 20250. Copying charges for each periodical or book are:

MICROFILMS: \$1.00 for each 30 pages or fraction copied from a single article or book.

PHOTOPRINTS: \$1.00 for each 4 pages or fraction copied from a single article or book.

RUSH SERVICE: Will be furnished upon payment of \$1.00 additional for each order.

Payment must accompany the order. Cash, Library coupons, check or money order drawn to the National Agricultural Library, U. S. D. A., are acceptable. Payment for orders originating outside of the United States should be made by international money order or draft on an American bank, or by UNESCO book coupons. Superintendent of Documents coupons and requests to furnish photocopy to be paid from Superintendent of Documents Deposit funds cannot be honored. Credit may be extended only to Government agencies and institutions. Billing address should be indicated.

### Library Coupons

National Agricultural Library coupons, valued at \$1.00 each, may be purchased in any quantity.

-----  
PLEASE GIVE COMPLETE BIBLIOGRAPHIC INFORMATION AS IT APPEARS IN THIS  
PUBLICATION FOR EACH ITEM REQUESTED.  
-----

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C., 20402  
\$26.50 per year, domestic; \$33.25 per year, foreign. Single copies vary in price.

Use of funds for printing this publication approved by the Director of the Bureau of the Budget (January 3, 1969).

## CHECKLISTS

Checklists of publications of the U. S. D. A., State Agricultural Experiment Stations, and State Agricultural Extension Services are prepared for the convenience of those who wish to follow the literature from these sources. All such publications are included also in the classified section and indexed in the author and subject indexes.

Abstracts are included with citations to U. S. D. A. publications, provided they are brief and are received with the original publication.

U. S. D. A. PUBLICATIONS

Publications in the various United States Department of Agriculture series are listed first, followed by publications issued by the various agencies within the Department, arranged alphabetically by name of agency.

Domestic requests for publications in the various Department series will be filled free to libraries and other qualified agencies and organizations upon application to the United States Department of Agriculture, Office of Information, Washington, D.C., 20250, as long as the supply lasts. They may also be purchased from the Superintendent of Documents, Washington, D.C., 20250.

Domestic requests for most publications issued by the Department will be filled free by the issuing agency, as long as the supply lasts. Requests should be addressed to the United States Department of Agriculture, name of the specific issuing agency, Washington, D.C., 20250.

Foreign governments, institutions and agencies which issue publications, may obtain United States Department of Agriculture publications in exchange by writing to the United States Department of Agriculture, National Agricultural Library, Exchange Unit, Washington, D.C., 20250.

For further information about the availability of United States Department of Agriculture publications, consult U.S.D.A. List Number 11, List of Available Publications of the United States Department of Agriculture, obtainable from the United States Department of Agriculture, Office of Information, Washington, D.C., 20250, and for sale by the Superintendent of Documents, Washington, D.C., 20402.

- 15345** U. S. D. A. Agricultural Research Service. Crops Research Division. GROWING PANSIES. U. S. D. A. Home Gard. Bull. 149, 7 p. Aug. 1968. 1 Ag84H

Pansies are among the most popular garden flowers today. They exhibit a wide range of colors, markings, and sizes.

Although pansies are hardy biennials, they are also grown as annuals. The ideal temperature range for growing pansies is from about 40° F. at night to 60° F. during the day. They will grow in all parts of the United States. They produce their best flowers in the spring when the weather is mild, then fade and are usually discarded when really hot weather arrives. In areas where long periods without frost are common, strong pansy plants will bloom in the fall and even in the winter.

Marketing Research Reports

- 15351** Lipton, W. J. MARKET QUALITY OF ASPARAGUS: EFFECTS OF MATURITY AT HARVEST AND OF HIGH CARBON DIOXIDE ATMOSPHERES DURING SIMULATED TRANSIT. U. S. D. A. Marketing Res. Rep. 817, 7 p. Aug. 1968. 1 Ag84Mr

Exposing harvested asparagus spears to controlled atmospheres containing 20 percent carbon dioxide (CO<sub>2</sub>) for 24 hours effectively reduced the incidence of bacterial soft rot at the butt end during subsequent holding of the spears in air (normal atmosphere) for about 1 week at 36°, 41°, or 50°F. An initially high (20 percent) but gradually decreasing concentration of CO<sub>2</sub> reduced soft rot at the butt end of spears in a simulated air transit test of 4 days at 59°. Neither treatment, however, was effective in reducing soft rot at the tips.

Bacterial soft rot at the tips of spears was significantly lower in less mature tight tips than in more mature loose or feathered tips. Culling spears with loose tips before shipment would reduce market losses in this crop.

Family expenditures.

- 15362 Steele, P. FOOD EXPENDITURES IN THE  
SOUTH. U. S. Agr. Res. Serv. ARS-62-5-3-5.  
Dec. 1968. A321.9 R31  
Households in the South spend less for food  
than those in other regions, according to a nationwide  
food consumption survey conducted by the U.S. Depart-  
ment of Agriculture. The value of food used at home dur-  
ing a week in the spring of 1965 averaged \$25.98 in the  
South—\$3 less than in the North Central and Western Re-  
gions and \$6 less than in Northeast (table 1). Of the  
South's \$25.98 total, \$23.39 was spent for purchased food  
and \$2.59 was the value of food produced at home or  
received as gift or pay.

- 15363 Forziati, F. H. CHANGES IN BODY SIZE OF  
YOUNG WOMEN SINCE 1940. U. S. Agr. Res.  
Serv. ARS-62-5-6-7. Dec. 1968. A321.9 R31  
Data for clothing industry.

- 15364 Britton, V. USE OF MANMADE TEXTILE  
FIBERS INCREASING. U. S. Agr. Res. Serv.  
ARS-62-5-8-11. Dec. 1968. A321.9 R31  
About 45 percent of the textile fiber used in  
the United States in 1967 was manmade (29 percent non-  
cellulosics such as nylon, polyester, acrylic, and olefin  
and 16 percent rayon and acetate), compared with 10 per-  
cent in 1940 (table 1). Use of the natural fibers has de-  
clined sharply—cotton from 81 percent of the total in 1940  
to 50 percent in 1967, and wool from 9 to 5 percent.

- 15365 Britton, V. TEXTILE FIBERS IN CLOTHING  
AND HOME FURNISHINGS. U. S. Agr. Res.  
Serv. ARS-62-5-11-13. Dec. 1968. A321.9 R31  
U.S. manufacturers used over 7 billion pounds  
of the major textile fibers—cotton, wool, and manmade—  
in goods for the Nation's consumers in 1966. Of this total,  
26 percent was used in men's and boys' wear; 24 percent  
in women's, misses', children's, and infants' wear; 36  
percent in home furnishings; and 14 percent in other con-  
sumer products. About 51 percent of the raw fiber was  
cotton, 7 percent wool, and 42 percent manmade. The re-  
lative importance of these fibers in the textile products  
made for consumers varied from item to item.

- 15366 Wolgamot, I. HOME ECONOMISTS CONTRI-  
BUTE TO RURAL DEVELOPMENT. U. S.

STEM PITTING OF PEACH IN SOUTH CARO-  
LINA. Plant Dis. Rep. 52(12):907. Dec. 1968. 1.9 P69P  
Stem pitting of peach was found in South Caro-  
lina in May 1968. Belowground symptoms of pitting and  
woody tissue disorganization were associated with yellow-  
ish foliage and purple spotting of leaves. The disease  
is known to exist in South Carolina in only one orchard of  
8-year-old "Coronite" peach trees.

- 15368 Staley, J. M., Altman, J., and Spotts, R. A. A  
SODIUM-LINKED DISEASE OF PONDEROSA  
PINE [PINUS PONDEROSA] IN DENVER, COLORADO.  
Plant Dis. Rep. 52(12):908-910. Dec. 1968. 1.9 P69P  
A chronic foliar chlorosis and tipburn of ponderosa  
and other pines in Denver, Colorado is described.  
Needles of affected trees exhibit tipburn, initiated by a  
band of resin infiltration followed by chlorosis and eventual  
necrosis. Examinations and cultural treatments over a  
10-year period have implicated no causal agents. More  
recent analyses show diseased foliage contains abnormal-  
ly high levels of sodium.

- 15369 Al-Shukri, M. M. INTERACTION BETWEEN  
FUSARIUM OXYSPORUM F. VASINFECTUM  
AND VERTICILLIUM DAHLIAE ON GOSSYPIUM HIRSUTUM,  
VARIETY SKALLERIDIS. Plant Dis. Rep. 52(12):  
910-913. Dec. 1968. 1.9 P69P

The results showed that both *Fusarium oxysporum* f. *vasinfectum* and *Verticillium dahliae* grew in vitro without any sign of antagonism. Also, the combined effects of both fungi on cotton plants increased the severity of wilt and greatly decreased the incubation period.

When both *Fusarium oxysporum* f. *vasinfectum* and *Verticillium dahliae* were present on the root system of a susceptible plant, the former species germinated quickly, penetrated the root rapidly, and grew faster in the host tissue than did the latter species.

- 15370 Culp, T. W., and Troutman, J. L. VARIETAL  
REACTION OF PEANUTS, ARACHIS HYPO-  
GAEA, TO STUNT VIRUS DISEASE. Plant Dis. Rep. 52  
(12):914-918. Dec. 1968. 1.9 P69P  
Several hundred peanut (*Arachis hypogaea*) va-  
rieties, introductions, and breeding lines were rated for  
plant reaction to natural infection of peanut stunt virus  
(PSV) under field conditions in Virginia in 1966 and 1967.  
None was immune, but several showed less severe symp-  
toms than others. Breeding line F393-7-1 exhibited the  
least PSV damage in several tests and gave varying re-  
actions under different levels of virus infection. More  
exact tests will be required to determine whether the  
entries showing the least PSV damage can be useful in  
controlling this disease in peanuts.

15371 McKinney, H. H. FURTHER STUDY OF THE LATENT STRAIN OF THE TOBACCO MOSAIC VIRUS. Plant Dis. Rep. 52(12):919-922. Dec. 1968. 1.9 P69P

In *Nicotiana sylvestris* infected with common TMV, virus of the latent strain failed to induce local lesions when challenge-inoculated on the mosaic leaves.

In pungent pepper, virus of the latent strain reduced the number of local lesions when the infected leaves were challenge-inoculated with common TMV or with a yellowing mutant of TMV. In "Samsun" tobacco, the virus delayed or prevented progress of the challenging strains, depending on the age of the leaf receiving the challenging inoculation, and on whether this leaf was the one previously inoculated with the virus of the latent strain (or one above it that contained the virus by the systemic route).

The virus of the latent strain could not be detected in the very young leaves of infected Samsun tobacco plants.

Serological tests made by the Ouchterlony gel-diffusion method showed the latent strain to be related to, but not identical with, common TMV, and not to be contaminated with common TMV. The ultraviolet spectral curve for purified virus of the latent strain was found to be typical for TMV strains, and it indicated that the latent strain is less concentrated in the tobacco plant than is common TMV. The virions of the latent strain are straight rods, resembling closely those of common TMV.

15372 Ullstrup, A. J., and Britton, M. P. AN UNUSUAL EPIDEMIOLOGIC OF COMMON CORN SMUT IN INDIANA AND ILLINOIS. Plant Dis. Rep. 52(12):922-923. Dec. 1968. 1.9 P69P

Seed disease associated with *Ustilago zaeae*.

15373 Kaloustian, G. H., and Jones, L. S. PEAR LEAF CURL VIRUS TRANSMITTED BY PEAR PSYLLA. Plant Dis. Rep. 52(12):924-925. Dec. 1968. 1.9 P69P

Pear psylla, *Psylla pyricola* Foerster, collected from trees infected with the pear decline virus transmitted pear leaf curl virus to test trees on domestic French rootstock and pear decline virus to test trees on Oriental rootstock. Also, the viruses were transmitted by graft from infected trees to healthy trees.

15374 Choopanya, D. DISTRIBUTION OF PEANUT STUNT VIRUS IN WHITE CLOVER IN SOUTH CAROLINA AND ITS RELATIONSHIP TO PEANUT CULTURE. Plant Dis. Rep. 52(12):926-928, map. Dec. 1968. 1.9 P69P

Peanut stunt virus (PSV) was found in white clover throughout most of South Carolina in 1967. Symptoms and serological tests were used for identification. The virus was also found during the fall, winter, and spring, which proves that white clover is an overwintering host. Peanut fields in the State were PSV-free, as demonstrated by the absence of typical symptoms and negative serological tests from suspected plants. Differences in soil and moisture requirements of peanuts and white clover are believed to be responsible for the failure of PSV to be transmitted from white clover to peanut fields in South Carolina.

15375 Nagai, H., and Smith, P. G. REACTION OF PEPPER VARIETIES TO NATURALLY OCCURRING VIRUSES IN CALIFORNIA. Plant Dis. Rep. 52(12):928-930. Dec. 1968. 1.9 P69P

Differential hosts and chloroplast agglutination tests were used to identify viruses isolated from commercial pepper plantings in California. Potato virus Y and tobacco etch virus were found to be the principal cause of pepper mosaic diseases. Tobacco mosaic virus, potato virus X, and cucumber mosaic virus were not isolated during the study.

In the common pepper, *Capsicum annum*, PI 264281 (P11), Agronomico 8, and Ac. 2120, no symptoms were found after mechanical inoculation with TEV and PVY isolates, while Yolo Y and the Brazilian varieties Avelar and Casca Dura were resistant to some of the virus isolates.

At least two additional unidentified viruses collected from pepper plants were infective to all pepper varieties used in these tests.

15376 Jones, J. P. SURVIVAL OF CERCOSPORA KIKUCHII ON SOYBEAN STEMS IN THE FIELD. Plant Dis. Rep. 52(12):931-934. Dec. 1968. 1.9 P69P

The fungus *Cercospora kikuchii* was found to overwinter on infected soybean debris collected from a number of fields in the Yazoo-Mississippi delta area. When infected stems were placed on and under two types of soil in an overwintering field test, the fungus on the buried stems ceased within 2 months to sporulate, although it continued to do so abundantly on buried stems. Plowing under of soybean debris after harvest would eliminate this source of spring inoculum.

15377 Allen, R. M. SURVIVAL TIME OF EXOCORTIS VIRUS OF CITRUS ON CONTAMINATED KNIFE BLADES. Plant Dis. Rep. 52(12):935-939. Dec. 1968. 1.9 P69P

Exocortis virus survived 8 days on steel knife blades. Infectivity of the virus was not affected over a wide range of time intervals between knife contamination and transfer to citron or by two sequential transfers by this method. Spread of the virus to susceptible hosts by contaminated tools was accomplished from all citrus species of commercial importance tried, including lemon, sweet orange, grapefruit, tangerine, and a trifoliolate hybrid. Time requirements for disease expression by citron scions are believed to be directly related to inherent vigor of rootstocks, environmental temperature, and cultural practices.

15378 Chi, C. C. NUTRITION STRESS IN RELATION TO FUSARIUM [OXYSPORIUM AND F. SOLANI] WILT AND ROOT ROT OF ALFALFA. Plant Dis. Rep. 52(12):939-943. Dec. 1968. 1.9 P69P

Host nutrition was shown to be an important factor in the development of Fusarium wilt and root rot in alfalfa. In general, disease incidence was highest at low levels of N, P, K, or Ca and declined with increasing concentrations of each element. Vigor of plants had a profound influence on the degree of disease development; optimal concentrations of the four elements produced vigorous plants and reduced disease. Osmotic pressure of the nutrient solution consistently influenced plant growth and disease development. High osmotic pressure in an otherwise balanced nutrient solution retarded plant growth and reduced disease incidence.

15379 Rawlins, T. E., and Booth, J. A. TWEEEN 20 AS AN ADJUVANT FOR SYSTEMIC SOIL FUNGICIDES FOR VERTICILLIUM [ALBO-ATRIUM] IN COTTON. Plant Dis. Rep. 52(12):944-947. Dec. 1968. 1.9 P69P

Obbero, F. P., Trujillo, E. E., and Aragaki, M. PHOMA [DESTRUCTIVA] LEAF SPOT OF TOMATO AND POTATO IN HAWAII. Plant Dis. Rep. 52(12):946-947. Dec. 1968. 1.9 P69P

15381 Cole, J. R. DIEBACK AFFECTING PECAN TREES IN SOUTHWEST GEORGIA AND NORTH FLORIDA. Plant Dis. Rep. 52(12):947-949. Dec. 1968. 1.9 P69P

Caused by *Botryosphaeria berengeriana*.

15382 Gil, D. L. MIMOSA WILT FUSARIUM CAUSED IN SEED. Plant Dis. Rep. 52(12):949-951. Ref. Dec. 1968. 1.9 P69P

Fusarium oxysporum f. sp. perniciosis was obtained from seeds of a wilted mimosa (*Albizia julibrissin*) tree and from seedlings grown from these seeds. Healthy seedlings inoculated with isolates from seed and seedlings became infected. This shows another method of spread of mimosa wilt.

15383 Klotz, L. J., and others. SOME FACTORS IN RESISTANCE OF CITRUS TO PHYTOPHTHORA [CITROPHTHORA AND P. PARASITICA] SPP. Plant Dis. Rep. 52(12):952-955. Dec. 1968. 1.9 P69P

W. P. Bitters, T. A. DeWolfe, and M. J. Garber, joint authors.

Citrus rootstocks, such as trifoliolate orange varieties and their hybrids (citranges and citremons), Citrus taianica, and siamelo, in soils heavily infested by *Phytophthora* spp. did not develop gummosis of the crown or trunk. These same rootstocks can be infected by placing the fungi directly on the cambium. Thus the importance of avoiding cultivation injuries and overwatering of trees is stressed. Alteration of resistance or susceptibility of lemon or orange scions by rootstocks to *Phytophthora* infections is variable and not necessarily related to resistance or susceptibility of the rootstocks.

15394 Griffin, G. D., and Stoker, G. L. SUSCEPTIBILITY OF EIGHTEEN POTATO VARIETIES TO MELOIDOGYNE HAPLA. Plant Dis. Rep. 52(12):956-957. Ref. Dec. 1968. 1.9 P69P

15395 Cantwell, A. M. EFFECT OF TEMPERATURE ON RESPONSE OF PLANTS TO OZONE AS CONDUCTED IN A SPECIALLY DESIGNED PLANT FUMIGATION CHAMBER. Plant Dis. Rep. 52(12):957-960. Dec. 1968. 1.9 P69P

Tests conducted in an environmental growth chamber, which was modified for air pollution studies, indicate "Bel W3" cigar wrapper tobacco shows an inverse relation between sensitivity to the phytotoxicant ozone and temperature. Such a result is suggested as an explanation for the higher incidence of ozone damage to crops in Delaware during the spring and fall although the peak ozone levels occur during the summer.

15396 Reynolds, G., and Lock, W. PLASTIC FILM. TUBE CLOSURES IN THE CONSERVATION OF FUNGAL CULTURES. Plant Dis. Rep. 52(12):961-962. Dec. 1968. 1.9 P69P

15398 Simpson, W. R. SUGARBEET VIRUS COMPLEX IN SOUTHWESTERN IDAHO. Plant Dis. Rep. 52(12):965-966. Dec. 1968. 1.9 P69P

15399 Hildebrand, E. M. RUSSET CRACK: A MENACE TO THE SWEETPOTATO INDUSTRY. II. NATURAL TRANSMISSION. Plant Dis. Rep. 52(12):967-971. Dec. 1968. 1.9 P69P

There was efficient natural transmission of russet crack virus in sweetpotato under exposed conditions in the field. It made little difference whether the virus was alone or in mixture with yellow dwarf virus or with the cork virus syndrome. Russet crack is a menace to the sweetpotato industry because the amount of natural transmission ranged as high as 75% in one growing season.

Greenhouse studies demonstrated that the abutilon whitefly (*Trialeurodes abutilonea*), the insect vector of sweetpotato yellow dwarf, did not transmit russet crack. The green peach aphid (*Myzus persicae*), a consistent vector of the cork syndrome indoors and outside, was likewise ineffective when the "short" or nonpersistent method of virus transmission was used.

During 1966 the field planting arrangement, of 1 diseased to 9 or more healthy, favored the "long" or persistent method of virus transmission by aphids. These observations provide evidence to implicate this insect by empirical means.

15390 Demski, J. W., and Boyle, J. S. SPREAD OF NECROTIC RINGSPOT VIRUS IN A SOUR CHERRY ORCHARD. Plant Dis. Rep. 52(12):972-974. Dec. 1968. 1.9 P69P

Pennsylvania.

The annual increase and spread of necrotic ringspot virus in a sour cherry orchard at University Park was recorded. Although virus spread did not appear to follow a pattern, the majority of "new infections" were located next to a previously infected tree. The greatest yearly increase in disease incidence occurred in the tenth year, after infection had reached about 25%. By the twelfth year, over 91% of the trees in the orchard were infected.

15391 Beraha, L. GRAY MOLD OF GREEN ONIONS ON THE MARKET. Plant Dis. Rep. 52(12):974-975. Dec. 1968. 1.9 P69P

Caused by *Botrytis allii* during transport.

15392 Evans, G. INFECTION OF XANTHIUM PUNGENS BY SEEDBORNE VERTICILLIUM DAHLIAE. Plant Dis. Rep. 52(12):976-978. Dec. 1968. 1.9 P69P

Australia.

The pericarp and pseudocarp of *Xanthium pungens* (Noogoora burr) were found to be infected by *Verticillium dahliae*. The level of infection varied from 0% to 75%, but averaged about 40% in burrs from most plants. Abundant microsclerotia were observed and identified at the base of the pericarp and pseudocarp and occasionally in the testa near the point of attachment to the parent plant.

It was shown by experiment in a field soil that seedlings of *X. pungens* are infected by seedborne *V. dahliae* as the radicle emerges from the base of the pseudocarp. Moreover, the fungus may infect the cotyledons of plants growing from infected seed.

The importance of infected seed in dissemination of *V. dahliae* is discussed.

15393 Schenck, N. C. FUNGICIDAL CONTROL OF WATERMELON DOWNY MILDEW AND ITS RELATIONSHIP TO FIRST INFECTION IN THE FIELD. Plant Dis. Rep. 52(12):979-981. Ref. Dec. 1968. 1.9 P69P

Caused by *Pseudoperonospora cubensis*.

In a comparison of numbers of applications of tetrachloroisophthalonitrile for downy mildew control, one to six applications at weekly intervals were made to watermelons. There were no significant differences in disease control in plants sprayed prior to symptom appearing regardless of the number of applications. Disease development was considerably slower on these plants than on those first sprayed after symptom appearance. Spores were not trapped prior to the onset of downy mildew symptoms. Therefore, spore trap data were of no value in timing spray schedules for disease control. Implications with respect to the usefulness of spore traps in timing fungicide applications are discussed.

#### ECONOMIC RESEARCH SERVICE

15439 Gale, H. F. INDUSTRY OUTPUT, LABOR INPUT, VALUE ADDED, AND PRODUCTIVITY ASSOCIATED WITH FOOD EXPENDITURES. Agr. Econ. Res. 20(4):113-133. Ref. Oct. 1968. 1 Ec7Agr

The study reported here is primarily descriptive. It shows the total output, labor, and value added requirements of each industry so that agricultural, food processing, and trade industries could produce the output represented by civilian expenditures for farm food in 1947 and 1958. The estimates of these data are made by means of the input-output framework. From these data we can pinpoint the contributions of various industries to the 1947-58 changes in total output, labor, and value added requirements to produce the farm food. These data are then interpreted to estimate the rate of increase in labor productivity for the whole subsystem producing farm food products. This system includes farmers, their suppliers, and the industries which sell to the suppliers as well as the food manufacturing, food distribution, and transportation industries.

#### FOREIGN AGRICULTURAL SERVICE

15462 Dobbins, C. E. PAST AND PROSPECTS: U.S. LIVESTOCK IN EXPORT MARKETS. Foreign Agr. 6(46):2-4. Nov. 11, 1968. A281.9 F76Fo  
Abstract, p.2.

15463 Meeker, B. K. DUTCH VIEW THE BUTTER MOUNTAIN. Foreign Agr. 6(46):5. Nov. 11, 1968. A281.9 F76Fo  
Policy to handle dairy surpluses.

15464 Traeger, F. W. SPINDLE COT RISING IN: THE PHILIPPINE ISLANDS TEXTILE INDUSTRY. Foreign Agr. 6(46):5. Nov. 11, 1968. A281.9 F76Fo

15465 Sheldon, G. W. DROUGHT HARMS SENEGAL'S COTTON. Foreign Agr. 6(46):6. Nov. 11, 1968. A281.9 F76Fo

The recent drought in Senegal has cut prospects for the 1968-69 cotton crop considerably. However, Senegal's program to expand its cotton industry has progressed enough in recent years so that one slow year need not keep the country from reaching its stated goal: self-sufficiency in cotton fiber and cloth by 1973.

- 15466 Durusoy, Y. Z. TURKEY PROMOTES CONSUMPTION OF FILBERTS. Foreign Agr. 6(46):7-8. Nov. 11, 1968. A281.9 F76Fo

Of Turkey's agricultural export crops—which are its main source of foreign exchange—filberts are the third most valuable, ranking below only cotton and tobacco. Turkey is the world's leading filbert supplier; it grows more than 80 percent of the world's total, and 85 percent of this production is exported.

In the past 15 years total world production of filberts (also called hazelnuts) has risen by two-thirds; consumption has not increased at the same rate. The resulting increase in Turkish filbert stocks in recent years has led the country's policy makers to take measures to increase world consumption. Unless such measures are successful, Turkey and other major producing countries will have to limit production.

- 15467 Lege, F. M. NEW AUSTRALIAN WHEAT PROGRAM. Foreign Agr. 6(47):4. Nov. 18, 1968. A281.9 F76Fo

As introduced to Parliament in the form of legislation, Australia's new Wheat Industry Stabilization Scheme contains some provisions not present when it was put to farmers for approval in mid-September. These provisions, of an administrative nature, nevertheless could have substantial effect on export marketing policies.

- 15468 Persi, A. R. CANADA ACTS ON EGGS, DAIRY ITEMS. Foreign Agr. 6(47):4. Nov. 18, 1968. A281.9 F76Fo

Canada recently announced a deficiency payment for eggs marketed in the 1967–68 support year and a plan to use more milk in the manufacture of butter and less in cheese.

- 15469 Hume, D. L. U.K. GRAIN PRODUCTION LOWER. Foreign Agr. 6(47):4. Nov. 18, 1968. A281.9 F76Fo

Grain production in the United Kingdom this year is forecast at over a million tons below 1967 output, primarily because of reduced yields per acre and difficult harvest conditions. With the harvest now over, the crop is put at 13.36 million long tons against 14.40 million last year.

- 15470 Trick, A. W. SWISS SEEK ADDITIONAL RECIPIENTS OF SURPLUS MILK. Foreign Agr. 6(47):6. Nov. 18, 1968. A281.9 F76Fo

In Switzerland surplus milk and milk products are being siphoned from the country by a new coordinated approach. A new central charity organization named "Dairy Products for Nedy Areas" was formed a few months ago to cooperate with several government agencies and the Union of Swiss Milk Producers. At the same time, the Federal Council of the Ministry of Agriculture, the supply and distribution agency that sets producer prices for milk and other agricultural commodities, earmarked US\$4.1 million for the purchase of dairy products for overseas donation. (In 1967, only \$580,000 was allocated).

- 15471 Cohen, M. H. NORDIC COUNCIL ACCELERATES AGRICULTURAL COOPERATION IN SCANDINAVIA. Foreign Agr. 6(47):7-8. Nov. 18, 1968. A281.9 F76Fo

Chiefly trade.

- 15472 Ehman, F. W. YUGOSLAV ALFALFA SUPPLIES NEEDED LIVESTOCK FEED. Foreign Agr. 6(47):8. Nov. 18, 1968. A281.9 F76Fo

Industry.

- 15473 Shelden, G. W. THE CASAMANCE GOAL; MORE RICE FOR SENEGAL. Foreign Agr. 6(47):9. Nov. 18, 1968. A281.9 F76Fo

Senegal's drive toward self-sufficiency in foodgrains is largely dependent on production gains in a single crop, rice, and it in turn on development projects in the Casamance.

- 15474 Schertz, L. P. THE ROLE OF FARM MECHANIZATION IN THE DEVELOPING COUNTRIES. Foreign Agr. 6(48):2-4. Nov. 25, 1968. A281.9 F76Fo

Chiefly harvesting and handling of grain.

- 15475 Johnson, L. E. PAST AND PROSPECTS: U.S. TALLOW AND GREASE IN THE EXPORT MARKET. Foreign Agr. 6(48):5-6. Nov. 25, 1968. A281.9 F76Fo

Foreign trade in U.S. tallow and grease has taken giant steps forward since the early 1950's, largely as a result of intensive market development efforts. To-day that trade has more than doubled to almost one-half of our production. Sales peaked at 2.4 billion pounds in 1964, last year totaled 2 billion, and consistently account for about two-thirds of total world trade. As important as the sheer volume of this trade is its profitability. The bulk of shipments are sold for dollars through commercial transactions, which marks a favorable contribution to the U.S. balance of payments.

- 15476 Ferree, P. J. LIBYA: PROFILE OF A PROMISING FARM MARKET. Foreign Agr. 6(48):7-9. Nov. 25, 1968. A281.9 F76Fo

As per capita income rises and per capita farm production decreases, this country has been increasing its imports of agricultural products.

## FOREST SERVICE

- 15477 Mielke, J. L., Krebill, R. G., and Powers, H. R. COMANDRA BLISTER RUST OF HARD PINES. U. S. Forest Serv. Forest Pest Leaflet. 62, rev., 8 p. Aug. 1968. A423.9 F764

Cronartium comandrae.

- 15478 Bedard, W. D. THE SUGAR PINE [PINUS LAMBERTIANA] CONE BEETLE. U. S. Forest Serv. Forest Pest Leaflet. 112, 6 p., map. July 1968. A423.9 F764

Conophthorus lambertianae.

Management.  
Summary, p. 35.

- 15490 U. S. D. A. Forest Service. Pacific Northwest Forest and Range Experiment Station. AN AIR PYCNOMETER FOR FOREST AND RANGE SOILS, BY D. D. WOOLDRIDGE. Portland, Oregon, 1968. 11 p. aTA710.W6

Bibliography, p. 10-11.

The air pycnometer described has been used for several years to assess total porosity and macro- and micropore space of forest and range soils. Procedures used are rapid, and results are precise and reproducible. Observations and certain results indicate the physical laws of clay-water systems are not constant for all moisture contents; however, errors introduced from this source are usually of considerably less magnitude than normal variation in forest and range soils.

## PLANT AND OPERATIONS, OFFICE OF

- 15491 U. S. D. A. Office of Plant and Operations. Service Operations Division. COPY AND DUPLICATING SERVICES. Washington, 1968. 29 p. aZ265.A5

## SOIL CONSERVATION SERVICE

- 15492 Booher, A. K. RECREATION STRIKES A SPARK IN LAND OF HULL AND YORK. Soil Conserv. 34(3):51-53. Oct. 1968. 1.6 So3S

Cordell Hull and Alvin C. York would be proud of the local people, rural and urban, who have united with single purpose to develop the resources of the rugged mountain country where they grew up. Recreation proved to be the needed catalyst for the Hull-York Lake and Resource Conservation and Development Project established in Tennessee's Upper Cumberland in 1965. Recreation facilities at Dale Hollow Lake are among the attractions now bringing a flood of visitors to the area.

- 15483 Young, J. W., and Thompson, M. E. A CITY PARK FOR THE ENTIRE COUNTY. Soil Conserv. 34(3):54-55. Oct.1968. 1.6 So3S  
A city recreation area in Cortland, N. Y. came into being in response to a locally recognized need for swimming facilities to serve all of Cortland County. The town of Cortlandville, the city of Cortland, and the county of Cortland joined to meet this need through action of the South Central New York Resource Conservation and Development Project.
- 15484 Taylor, H. PHEASANT HUNTING 30 MINUTES FROM SAN FRANCISCO. Soil Conserv. 34(3):56. Oct.1968. 1.6 So3S  
Recreational use of land to supplement farmer income.
- 15485 Smith, L. E. RECREATION PARK DRAWS VISITORS TO ROCK CREEK [MARYLAND] RESERVOIRS. Soil Conserv. 34(3):57-59. Oct.1968. 1.6 So3S  
Most people who visit and use the Upper Rock Creek Regional Park probably never suspect that it revolves around two flood and sediment control impoundments, sculptured out of the earth with bulldozers. They see the water-oriented park for its boating, fishing, picnicking, and related recreational opportunities and accept the landscape as Nature's design.
- 15486 Loe, J. NOW THERE'S RECREATION AT COTILE [LAKE, LOUISIANA]. Soil Conserv. 34(3):60-62. Oct.1968. 1.6 So3S  
Watershed project lake and adjoining area offer wide range of activities.
- 15487 Keeter, F. E. SMALL DAMS SATISFY A BIG THIRST IN TUNISIA AS WATER FOR MANY USES FLOWS FROM RESERVOIRS. Soil Conserv. 34(3):62. Oct.1968. 1.6 So3S  
Multipurpose ponds are being constructed as the answer to many different water needs in central Tunisia where the rainfall is less than 20 inches annually, and most of it falls during the winter.
- 15488 Phillips, C. G. TAKING THE MEASURE OF OUTDOOR RECREATION RESOURCES. Soil Conserv. 34(3):63-64. Oct.1968. 1.6 So3S
